About SIES IEM

South Indian Education Society's Indian Institute of Environment Management was established in 1999 at the SIES campus in Nerul, Navi Mumbai. Since its foundation, IEM has been an active proponent of knowledge-based research and development to address upstream concerns on conservation of natural resources and protection of environment. IEM took up challenging issues in the areas of sustainable management of hazardous waste and drinking water; anaerobic biotechnology, development of biosurfactants, biofertilizers, eco-restoration of natural resources and mapping etc. These research projects were supported with funding from DST, DBT, BRNS, IGIDR, Mumbai; MoEFCC, GEC and Wetlands International South Asia & Loktak Development Authority and ICMR. SIES - IEM has conducted several tailor-made training programmes for different sectors from time to time. The technologies developed in lab have been successfully transferred to society at rural and urban interface.

IEM has organized three National Conferences in 2012, 2014 and 2015 and one International Conference in 2017 on pertinent issues of Environment and Sustainable Development. These conferences were sponsored by government agencies viz. Department of Science and Technology, CSIR, Board for Research in Nuclear Sciences, Department of Atomic Energy, DRDO, Maharashtra Pollution Control Board and prestigious industries working in the areas of Environment Management.

About the Conference

An adequate supply of safe drinking water is a basic human need. As per Sustainable Development Goal 6 there should be equitable access to safe and affordable drinking water for all by 2030. Global population is increasing at a rapid pace and this will increase the demand for water in future. With limited water resources there is a growing need to monitor and manage this resource. In recent decades, applications of geospatial technology have gained considerable interest among the scientific communities for understanding, monitoring and managing water resources.

This Conference will provide an interactive forum for geospatial professionals, scientific communities, academicians, researchers, students and industry professionals to understand various complex problems associated with water management and provide solutions.

Conference Theme

The GWM- 2018 will focus on following themes:

1. GIS and Remote sensing in water management
2. Smart cities and urban water supply management
3. Advanced Instrumentation Technique for Monitoring Water Quality
4. Advance techniques in drinking water management
5. Low cost water purification technologies
6. Saline water intrusion studies
7. Desalination
8. Public Private Partnerships
9. Water laws & policy: problems, prospects and consumer perspective
10. Latest technologies in Water Storage Systems
11. Drinking water management for urban poor communities
12. Water conservation
13. Zero water discharge
